# EMI/EMP Filter Protection Connectors

## For Protection of Sensitive Circuits

### Overview

Amphenol® EMI/EMP Protection Connectors offer the versatility of standard connectors with EMI/EMP protection for sensitive circuits. Internal housing of the EMI/EMP devices eliminates costly and bulky exterior discrete protection devices.

**Virtually all major MIL-Spec circulars can be incorporated with filter devices:**

- MIL-DTL-38999
- MIL-DTL-5015
- MIL-DTL-26482
- MIL-DTL-27599
- MIL-DTL-83723
- MIL-DTL-26500

For more information visit [www.amphenol-aerospace.com](http://www.amphenol-aerospace.com). The Micro-Miniature Catalog 12-M1 is online or contact an Amphenol Salesperson for more information.

## Rectangular

Rectangular Connectors available by Amphenol:

- MIL-DTL-24308 D-Sub
- MIL-DTL-83513 Micro D
- ARINC 404/600
- DOD-83527 Rack and Panel
- MIL-DTL-83733 Rack and Panel

Rectangular filter interconnects are manufactured and supplied by Amphenol Canada ([www.amphenolcanada.com](http://www.amphenolcanada.com)).

## Advantages

### ADVANTAGES OF FILTER CONNECTORS:

- Reduction in overall weight and space with the elimination of external filter circuits
- Reduction of solder junctions
- Increase in reliability due to fewer connections
- Fragile filter elements protected by connector shell from handling and environmental damage
- Pre-testing from factory and ready for installation

## Options

### AMPHENOL OFFERS FILTER CONNECTORS, WHICH CAN INCLUDE:

- EMP protection using diodes
- EMP protection utilizing metal oxide varistors (MOV's)
- Filtered plug connectors
- Glass fused hermetic seal
- ESD protection
- Combinations of filtering devices within one connector package

## Filtering Solutions

PLANARS, MOV'S, AND DIODE CONTACTS

Amphenol provides a wide range of filtering solutions. You can select your options for your particular interference threats - VHF, UHF, MF1, HF or other filter ranges, then couple with a connector package of your choice. Or give Amphenol your custom shell design requirements for assistance in designing your unique filter solution.

EMI Filter connectors are intended for use in temperatures from  $-55^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$ . Attenuation will change with feed-through current and temperature.

To assure reliability, connectors may be subjected to an attenuation performance test verifying proper assembly and grounding of the filters. Attenuation data on filter performance is stated in reference to a 50 ohm impedance system in order to allow filter performance to be more easily translated into real world impedances. Those interested in determining the expected filter performance in an impedance system other than 50 ohms may refer to page 285 of this catalog or may contact Amphenol Aerospace for further assistance.

### IT IS SUGGESTED THAT THE USER(S) ANALYZE THEIR SYSTEM REQUIREMENTS FOR EMI PROTECTION IN THE FOLLOWING AREAS:

- Working voltage (DC or AC and Frequency)
- Peak voltage
- Desired attenuation at a given frequency level
- Any special capacitance limitations

Planar Capacitor Array  
Diode Contacts

Assembly Capacitor  
and MOV Planars

# EMI Capabilities

## For Maximum Design Flexibility, Continued

# Planar Capacitor Technology

The Amphenol® EMI filter connector utilizes planar capacitor technology to provide the user with the most reliable and cost effective performance across the frequency range. (See MOV and Diode pages 71-73).

Several array configurations are available, see page 274 for illustrations. An encapsulant of oven-cured epoxy in the rear provides:

- Mechanical and thermal insulation of the ceramic elements – mechanical loading can be accomplished without capacitor damage.
- Pins can be bent 90° and straightened with no damage to the filter.
- Hermeticity ( $4.6 \times 10^{-3}$  cc/sec) – prevents water from entering through the rear of the connector in high humidity environments.
- Amphenol recommends using metal protection caps during cleaning operations.

## Wire Terminations

### METHODS OF WIRE TERMINATION:

- Solder cup - wire termination
- PCB termination (Pre-tinning is available)
- Solderless wrap
- Amphenol® UTS (Universal Termination System) allows crimp termination. It uses crimp insertable socket contacts on conductor wires. Sockets mate with filter pins within the connector body. (Socket type M39029/57). (For further contact information, see section, 38999 Series I & II).
- Weld terminal for thermocouple contacts
- Compliant Pin (press fit) for epoxy

## Contacts

### CONTACT OPTIONS:

- Coaxial, concentric twinax, triax and quadax contacts can be included in arrangements of filtered contacts for signal or power circuits (Please refer to the High Speed Contacts Section for High Frequency Contacts for Multi-Pin Connectors).
- Filter contacts with differing cut-off frequencies can be mixed in any given insert arrangement. (ratio 100:1 typical)
- Ground, insulated or filter contacts can be combined within the same connector to meet unique or changing frequency protection requirements.
- Thermocouple contacts
- Diodes or MOV for EMP

\* More in-depth information on attenuation is available in: L-1146, General Design Guideline for EMI Filters and/or TVS (Transient Voltage Suppression) Connectors.

Also for further information ask for:

L-1145, How to Specify Filter Connectors.

# Filter Connector Options

## ADAPTERS:

### Features and Benefits:

- Effective and economical method of introducing EMI filtering and/or transient protection to an installed system
- Intermateable with all popular MIL-SPEC connectors
- Can also be configured to provide transient protection utilizing diodes and MOVs
- Space qualified components available
- Quick and efficient installation
- Readily available in MIL-DTL-38999 Series I, II, and III as well as MIL-DTL-26482 types

For more information see page 70

## FILTER PLUG:

### Features and Benefits:

- Utilized when access to receptacle is denied
  - Utilizes same components as standard EMI/EMP receptacles
  - Can be assembled to electrical harness
  - Alternative to connector adapter when length restrictions exist
- Consult Amphenol Aerospace for availability.

# Transient Protection

## DIODE:

### Features and Benefits:

- Versatility with transient protection for sensitive circuits
- Low capacitance diode for high speed signals
- Can be used in combination with Filters and MOV's
- Transients up to 200 Volts either Bipolar or Uni-polar
- MIL-S-19500 Compatible
- Available for Surface Mount, or "Leaded" type devices
- Nanosecond response time

For more information see pages 73

## MOV:

### Features and Benefits:

- Filter connector size package
  - Protection for 14, 31, 38 DC voltage circuits
  - No additional circuits required
  - Low impedance
  - Elimination of costly external suppression assemblies
  - Nanosecond response time
- For more information see pages 71, 72

## ESA - ENERGY SHUNTING ASSEMBLY:

### Features and Benefits:

- Compact unit providing lightning and EMP Protection
- Eliminates per line circuit protection devices
- Single surge arrestor providing space saving
- Simplified assembly can be integrated with an EMI filter connector

For more information see page 75

# ESD

## ESD:

### Features and Benefits:

- Utilizes The Faraday Cage Principle to shunt ESD events through conductive enclosures
- Maintains same physical envelopes as standard counterparts
- Eliminates need for discrete components
- Infinite pulse life

For more information see page 75

# High Speed

## HIGH SPEED:

Filter connector can incorporate high frequency coax, twinax, triax quadax and differential twinax contact:

### Features and Benefits:

- Eliminate discontinuities or impedance variations
- High speed data transfer
- Fits various RG and special cables

# EMI/Transient Protection

## Specials

# Sealed Connectors

### HERMETIC & HIGH SPEED HERMETIC:

#### Features and Benefits:

- Leak rate of  $1 \times 10^{-7}$  cc of He/sec or less
  - Utilizes fused glass insert in a steel shell
  - Approximately 1/2 inch longer than standard series
  - Filter and Transient protection integration available.
  - Hermetically sealed High Speed Contacts available
- For more information [www.amphenol-aerospace.com](http://www.amphenol-aerospace.com)

### AQUACON:

#### Features and Benefits:

- Underwater Use
- Hermetically Sealed-Moisture/Oil Resistant 1500 PSI capability
- Leak rate of  $1 \times 10^{-7}$  cc of He/sec or less
- Utilizes fused glass insert in a steel shell

For more information see the Aquacon catalog online at [www.amphenol-aerospace.com](http://www.amphenol-aerospace.com)

### EPOXY SEALED CONNECTORS:

#### Features and Benefits:

- Light weight alternative to glass sealed hermetic connector
- Leak rate of  $1 \times 10^{-5}$  cc of He/sec leak rate maintained after temperature cycling, 5 cycles -55 to +125°C
- Available in standard and custom configurations.
- Available in virtually all major MIL-SPEC circular connectors

### SEALED RECEPTACLES WITH CRIMP CONTACT:

#### Features and Benefits:

- Leak rate of  $1 \times 10^{-5}$  cc of He/sec leak rate maintained after temperature cycling, 5 cycles -55 to +125°C
- Allows quick and reliable termination using standard M39029/57 socket contacts.
- Intermateable & inter-mountable with standard 38999 Series III plugs.

For more information [www.amphenol-aerospace.com](http://www.amphenol-aerospace.com)

# Printed Circuit Board Mount

### PRESS FIT CONNECTORS:

#### Features and Benefits:

- Solderless mounting on printed circuit boards
- High speed
- Low cost
- Elimination of soldering thermal stress
- No cold soldered joints
- No short circuits
- No cleaning of excess flux
- Optional contact for piercing conformal board coating is available.

For more information [www.amphenol-aerospace.com](http://www.amphenol-aerospace.com)

### PRINTED CIRCUIT BOARD MOUNT:

#### Features and Benefits:

- Allows mounting directly to a PC board, Flex circuit, and header connector
- Available in Composite and Aluminum shells
- Improved reliability by elimination of external spacers and washers
- Stand-off shells available in different configurations

For more information see page 29, 30, 35, 36, 49, 52

### HEADER FOR FLEX PRINTED OR PC BOARD:

#### Features and Benefits:

- Circular and rectangular
- Provides easy separation of the connector from the PC board or flex
- Cost savings in the manufacturing process
- Assemblies can be vapor phase or wave soldered to flex/printed circuit board
- Eliminates possible damage to your expensive filter, TVS protected connectors, or Printed Circuit Boards

For more information [www.amphenol-aerospace.com](http://www.amphenol-aerospace.com)

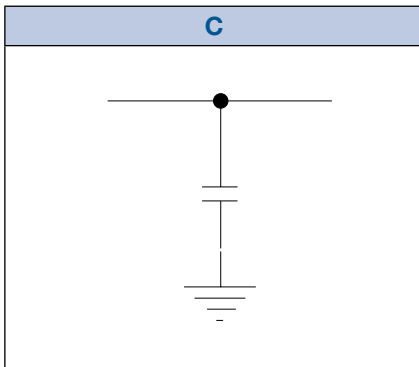

### COMPOSITE:

#### Features and Benefits:

- Meets MIL-DTL-38999, Series III dimensional lengths
  - Offers same high performance as its metal counterpart
  - Lightweight: 17%-70% weight savings over metal
  - Corrosion Resistant
  - Offers better environmental performance than its metal counterpart
  - Durable- 1500 coupling minimum
- See FCTV Composites on pages 27-30

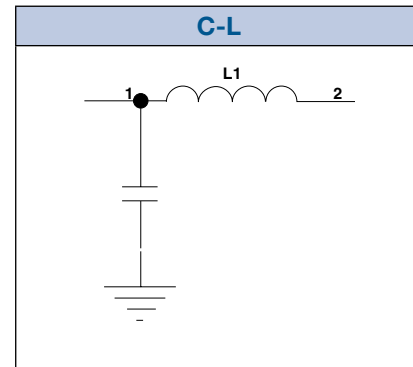

Amphenol® EMI Connectors are produced with several types of filters. They are all low band pass filters with the following configurations:

“C” filters involve a single capacitor. This simple, cost efficient design excels at low frequency performance which often exceeds the performance of multiple-component configurations.

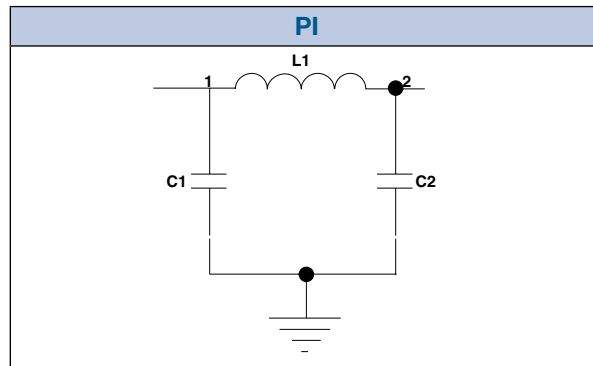

“L-C” filters excel when the source impedance is less than the load impedance, often outperforming “PI” filters at frequencies lower than 10MHz

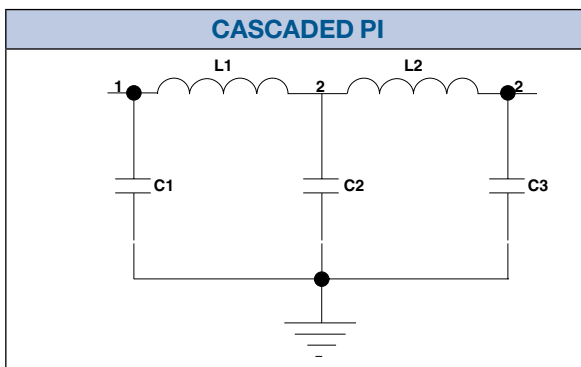

“C-L” filters are the inverse of “L-C” filters, performing best when the source impedance is greater than the load impedance

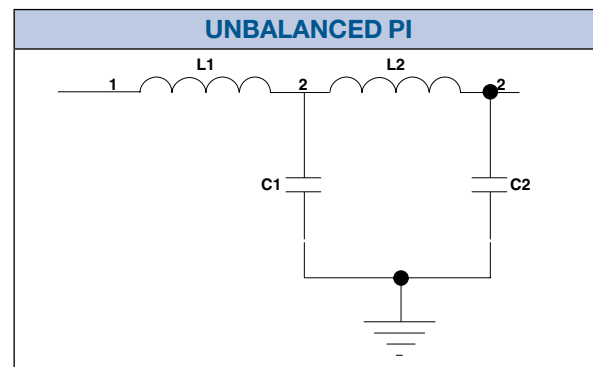

“T” filters combine the advantages of both the “L-C” and “C-L” filter types in one package, with superior high frequency performance.

Typical of MF1, VHF and UHF designations, “PI” filters are the workhorse of the filter industry. Combining performance with cost efficiency, this three-component filter has a steep insertion loss curve, and excels at frequencies above 10MHz. “PI” filters work well with a combination of different source and load impedances

Typical of the HF1 designation, “Cascaded PI” filters contain three shunt capacitors and two series inductors, resulting in a very steep insertion loss curve, outperforming all other filter configurations at frequencies above 10MHz.

“Unbalanced PI” filters have all the advantages of “PI” filters, with superior performance when the source impedance is less than the load impedance.

Consult Amphenol Aerospace for attenuation performance values

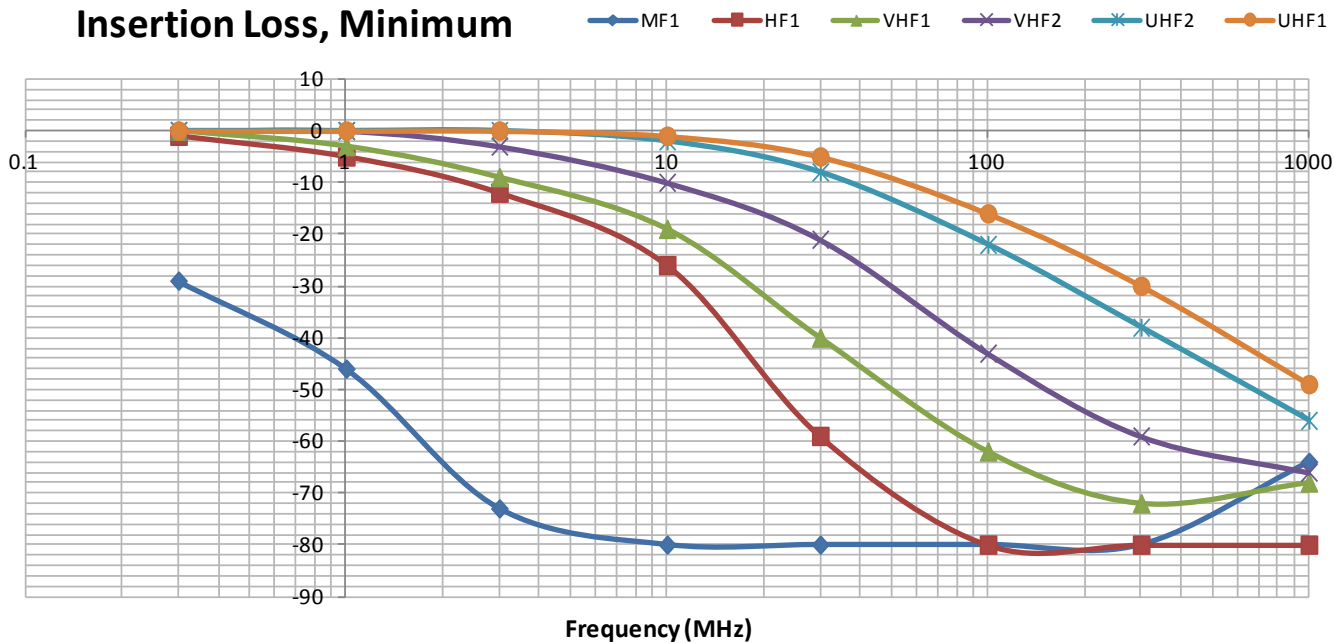

# Filter Characteristics

## Attenuation Curve

AAO Filter Designation	MF1 *	HF1	VHF1	VHF2	UHF2	UHF1
Filter Type	PI	Casc PI	PI	PI	PI	PI

Insertion Loss 300 MHz **	80	80	72	59	38	30
Insertion Loss 1 GHz **	64	80	68	66	56	49

General Specifications ***	
Air leakage max	4.6 x 10 <sup>-3</sup> cc/sec
Operating Temp Range	-55 to +125 deg C
Max RF Current (amps)	3
Feed-Thru Current, max, sz 22 and 23 cont	5
Feed-Thru Current, max, sz 20 cont	7.5
Feed-Thru Current, max, sz 16 cont	13

### Insertion Loss, Minimum

Notes:

- \* MF1 designation is not available in size 22 and 23 contacts.
- \*\* All insertion loss values are minimum, in units of -db. Insertion loss performance will vary due to voltage, current and temperature. Consult Amphenol Aerospace for more information.
- \*\*\* Common for all filter types.
- \*\*\*\* Higher DWV ratings are available on request. Consult Amphenol Aerospace.

# Impedance Matching Formula (Your System to a 50 Ohm System)

The following formula and example are offered in order to determine the expected filter performance in an impedance system other than 50 ohms.

With the attenuation expressed in 50 ohms and the transfer impedance curve shown in Figure 1 below, a designer can relate the expressed attenuation to the input and output impedance of their circuit.

Example:

- (1) Noise is 40dB above specification level at 100 MHz
- (2) Output and input impedance are 10 and 100 ohms respectively
- (3) Amphenol® VHF 7000 pf filter has a 65 dB minimum attenuation at 100 MHz and +25°C

Formula (Taken from Figure 1):

$1.4 \times 10^{-2}$  ohm = transfer impedance  
for 65 dB in a 50 ohm system

$$\text{Atten (dB)} = 20 \log_{10} \left[ 1 + \frac{Z_s Z_L}{Z_{12}(Z_s + Z_L)} \right]$$

$Z_s$  = source impedance (output)

$Z_L$  = load impedance (input)

$Z_{12}$  = transfer impedance

Atten = filter performance in a system other than 50 ohms

$$\text{Atten (dB)} = 20 \log_{10} \left[ 1 + \frac{10(100)}{1.4 \times 10^{-2} (10 + 100)} \right]$$

Attenuation = 56.3dB

In this case, the 7000 pf VHF filter will give 56.3 dB which is 16.3dB below the desired reduction in noise (40dB) as stated in the above problem.

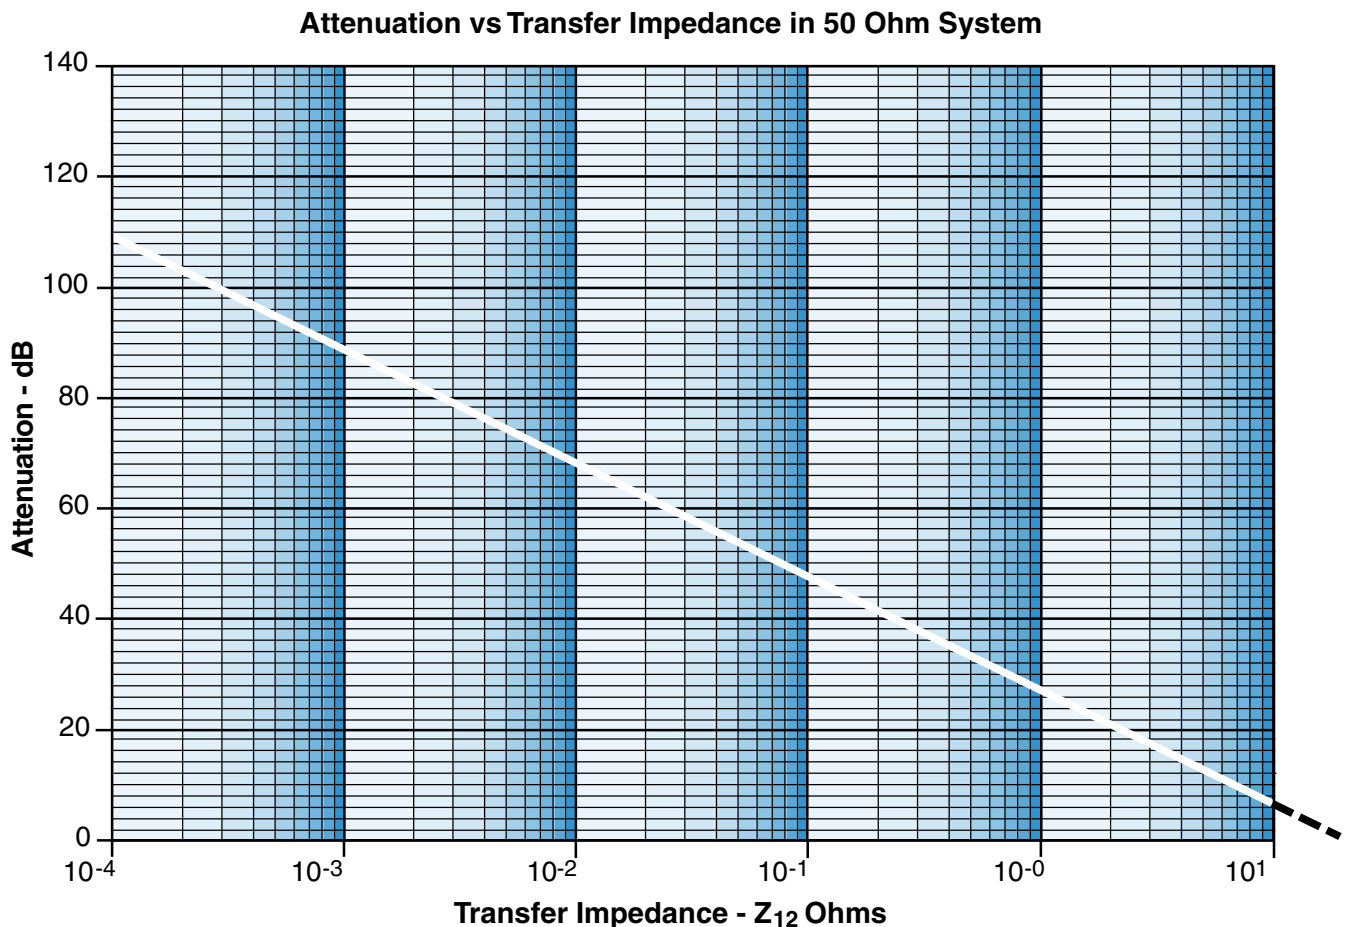

Figure 1

# Quality Assurance Testing

## Testing

### ACCEPTANCE TESTING

All filter connectors undergo extensive acceptance testing to assure product quality. An outline of standard acceptance testing performed is as follows:

### MECHANICAL INSPECTION

- Dimensional inspection of shells, keys, keyways and mounting surfaces by either in-process inspection of components or inspection of final assemblies.
- Visual inspection of contacts, inserts and seals, gaskets and surface finish of shells and hardware.

### ELECTRICAL TESTS

- Insulation resistance of filter contacts is checked 100% **at the working voltage and to the test limit** listed for each filter in the filter selection data table.
- Dielectric withstanding voltage is tested on 100% of filter contacts at the voltage listed in the filter selection data table.
- Capacitance is tested 100% at 1KHz.

### SPECIAL TESTS/PROCESSES

In addition to the standard acceptance testing and processes, the following additional production testing and processing can be provided upon request:

- Automated attenuation testing (through 100 MHz)
- Attenuation testing available through 1G upon special request. Contact Amphenol Aerospace in Sidney for additional details.
- Leakage inspection
- Thermal cycling/shock
- Burn-in
- De-gassing

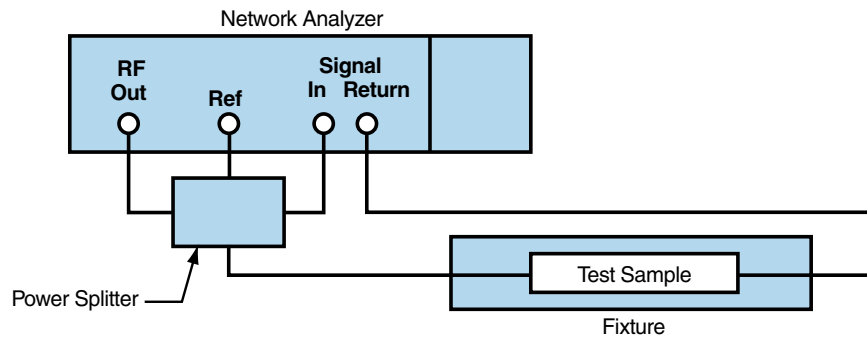

Consult Amphenol Aerospace for further information.

### QUALIFICATIONS

Amphenol® filter connectors have been qualified and are on periodic requalification to specification BSF-1 (available from your Amphenol representative). This is patterned after MIL-DTL-38999, modified to include mechanical and environmental testing and electrical parameters important to filter connector performance.

These acceptance tests, along with exhaustive in-process inspection and testing, give Amphenol® filter connectors their reputation for reliability.

### ATTENUATION TEST CIRCUIT

There are multiple test stations located on the Amphenol production floor that support all in-process, final electric and qualification testing as necessary.

- X Completely tooled.
- + Majority of tooling is completed (contact Amphenol Aerospace for availability).
- ◆ Not tooled for 02-R.
- P Available with Pin contacts only
- S Available with Socket contacts only
- P/S Available with Pin contacts or Socket contacts
- ★ Ground plane proprietary option available. Arr. 9-5 is exclusively ground plane type.
- Not Mil-Qualified.
- ◇ 21-75 is Mil-Qualified with twinax contacts only. Note: MS connector 21-75 is supplied with size 8 twinax. Commercial connector 21-75 is supplied with size 8 coax.

- HD designates High Density 38999 Series III insert patterns which use size 23 contacts only. Not rated over 175°C.
- \* Hermetic inserts - solder termination standard. (Contact Amphenol Aerospace for optional PCB or eyelet termination).
- \*\* Two size 16 contacts dedicated to fiber optics. See the Fiber Optic section for more information.
- \*\*\* For use in MIL-STD-1760 applications.
- † For RG 180/U and RG 195/U cables only.
- †† Size 8 Coax and Twinax are interchangeable.
- (2) Not Tooled for RP or 02RE
- (3) Pin inserts only, not tooled for RP or 02RE (Consult Amphenol Aerospace for avail.)
- (5) MS Connector 21-79 has provision for two size 8 coax contacts. Coax contacts are not supplied unless specified by customer.

- X Completely tooled.
- + Majority of tooling is completed (contact Amphenol Aerospace for availability).
- ◆ Not tooled for 02-R.
- P Available with Pin contacts only
- S Available with Socket contacts only
- P/S Available with Pin contacts or Socket contacts
- ★ Ground plane proprietary option available. Arrg. 9-5, 26-62 is exclusively ground plane type.
- Not Mil-Qualified.
- ◇ 21-75 is Mil-Qualified with twinax contacts only.
- \* Hermetic inserts - solder termination standard. (Contact Amphenol Aerospace for optional PCB or eyelet termination).

- HD designates High Density 38999 Series III insert patterns which use size 23 contacts only. Not rated over 175°C.
- \*\* Two size 16 contacts dedicated to fiber optics. See the Fiber Optic Section for more information.
- \*\*\* For use in MIL-STD-1760 applications.
- † For RG 180/U and RG 195/U cables only.
- †† Size 8 Coax and Twinax are interchangeable.
- (2) Not Tooled for RP or 02RE
- (3) Pin inserts only, not tooled for RP or 02RE (Consult Amphenol for avail.)
- (4) MS connector 21-75 is supplied with size 8 twinax. Commercial connector 21-75 is supplied with size 8 coax.
- (5) MS Connector 21-79 has provision for two size 8 coax contacts. Coax contacts are not supplied unless specified by customer.

## 7. (OPTIONAL) THIS WILL CHANGE CONNECTOR TO PCB TERMINATION FROM DEFAULT SOLDER CUP

Code	± .030	Pre-Tinned?
1	0.120	NO
2		YES
3	0.185	NO
4		YES
5	0.270	NO
6		YES

### Note:

#### -2XX Suffix

Any combination of filters, non-filters, grounds, and non-standard contact terminations will require -2XX suffix. Please consult Amphenol Aerospace for assistance in setting up these part numbers.

- Standard voltage for diode is ±8 volts. Any deviation requires a -2XX suffix.
- Standard voltage for a MOV is 47 volts. Any deviation requires a -2XX suffix.
- Standard diode/filter combination is ±8 volt/VHF-1 filter. Any deviation requires a -2XX suffix.
- Standard MOV/filter combination is 47 volt/VHF-1 filter. Any deviation requires a -2XX suffix.

# FTV Aluminum & FCTV Composite

## 38999, Series III Features, Alternate Rotations

The Amphenol® FTV Series III, demonstrates unsurpassed technical leadership. With added filter features, the high performance general duty threaded connector is designed to withstand the pressures of severe environment applications. The FCTV Series is the Composite Series III with filtering for EMI/EMP protection. It offers the same high performance as its metal counterpart, the FTV, but with a lightweight, corrosion resistance shell.

### FTV

Composite FCTV Connector for PCB board mounting. Amphenol is currently the only supplier of one-piece composite PCB stand-off shells.

### FTV & FCTV COMPOSITE INTERMATEABLE WITH MIL-DTL-38999 SERIES III CONNECTORS

- Quick Mating - completely mates in a 360° turn of the coupling nut
- Lockwiring Eliminated - incorporates anti-decoupling device
- Contact Protection - 100% "scoop-proof"
- Improved Moisture Resistance - prevents electrolytic erosion of contacts
- Lightweight Composite Shell - 17% – 70% weight savings over metal
- Corrosion Resistant - available in standard MIL-DTL-38999 olive drab cadmium (175°C) and electroless nickel plating (200°C), both withstanding 2000 hours of salt spray exposure. The base material is able to withstand an indefinite exposure to salt spray.
- Durability - 1500 couplings minimum (in reference to connector couplings, not contacts)

G

# FJT – MIL-DTL-38999, Series II

## Features, Alternate Rotations

The Amphenol® FJT Series space and weight saving design, coupled with a filter, gives high reliability.

- Intermateable with MIL-DTL-38999/27599 Series II connectors (see Catalog 38999, Series II JT section)
- Quick positive coupling – 3 point bayonet locking
- Error-proof alternate positioning of shell keyways
- Higher reliability and greater durability with permanently encapsulated contacts
- Environmental resistant
- Aluminum shells with several finish options

## FJT

### FJT MASTER KEY/KEYWAY ROTATION

Shell Size	AB Angle of Rotation (Degrees)				
	Normal	A	B	C	D
8	100	82	-	-	118
10	100	86	72	128	114
12	100	80	68	132	120
14	100	79	66	134	121
16	100	82	70	130	118
18	100	82	70	130	118
20	100	82	70	130	118
22	100	85	74	126	115
24	100	85	74	126	115

A plug with a given rotation letter will mate with a receptacle with the same rotation letter. The AB angle for a given connector is the same whether it contains pins or sockets. Inserts are not rotated in conjunction with the master key/keyway.

AB angles shown are viewed from the front face of the connector. A receptacle is shown at right. The angles for the plug are exactly the same, except the direction of rotation is opposite of that shown for the receptacle.

# FLJT – MIL-DTL-38999, Series I

## Features, Alternate Rotations

The Amphenol® FLJT Series offers all the design features of the FJT plus a 100% “scoop-proof” contact protection design.

- Intermountable with MIL-DTL-38999/27599 Series I connectors (see Catalog 38999, Series I LJT section)
- Contact Protection - shell design prevents contact damage
- Quick Positive Coupling – 3 point bayonet locking
- Higher reliability and greater durability with permanently encapsulated contacts
- Environmental Resistant
- Aluminum shells with several finish options
- Error-proof alternate positioning of shell keyways
- Corrosion Resistant - 500 hour salt spray olive drab cadmium over nickel plating, class T (aluminum), electroless nickel plating, class F (aluminum) or stainless steel shells

# FLJT

Filter

### FLJT MASTER KEY/KEYWAY ROTATION

Shell Size	AB Angle of Rotation (Degrees)				
	Normal	A	B	C	D
9	95	77	-	-	113
11	95	81	67	123	109
13	95	75	63	127	115
15	95	74	61	129	116
17	95	77	65	125	113
19	95	77	65	125	113
21	95	77	65	125	113
23	95	80	69	121	110
25	95	80	69	121	110

A plug with a given rotation letter will mate with a receptacle with the same rotation letter. The AB angle for a given connector is the same whether it contains pins or sockets. Inserts are not rotated in conjunction with the master key/keyway.

AB angles shown are viewed from the front face of the connector. A receptacle is shown at right. The angles for the plug are exactly the same, except the direction of rotation is opposite of that shown for the receptacle.

# FSJT – MIL-DTL-38999 Type

## Circular Filter Connectors - Features, Alternate Rotations

The Amphenol® FSJT Series combines the unique design features of the scoop-proof FLJT Series with the standard mounting dimensions of JT types.

- 100% scoop-proof design
- Standard mounting dimensions
- Compliance with European Specifications PAN6433-2, LN29729, VG96912
- Uses proven filter technology with available components from other series
- EMP protection versions available

### FSJT

#### FSJT Master Key/Keyway Rotation

Shell Size	AB Angle of Rotation (Degrees)				
	Normal	A	B	C	D
8	95	-	-	-	-
10	95	81	67	123	109
12	95	75	63	127	115
14	95	74	61	129	116
16	95	77	65	125	113
18	95	77	65	125	113
20	95	77	65	125	113
22	95	80	69	121	110
24	95	80	69	121	110

A plug with a given rotation letter will mate with a receptacle with the same rotation letter. The AB angle for a given connector is the same whether it contains pins or sockets. Inserts are not rotated in conjunction with the master key/keyway.

AB angles shown are viewed from the front face of the connector. A receptacle is shown at right. The angles for the plug are exactly the same, except the direction of rotation is opposite of that shown for the receptacle.

# FBL MIL-DTL-38999, Series IV

## Circular Filter Connectors

### Features, Alternate Rotations

Components designed to meet the severe mechanical and environmental requirements of MIL-DTL-38999 Series III are now available to Series IV users. Modifications of the connector are available with EMP protection, incorporating MOV's, diodes or a combination of both.

- Intermateable with MIL-DTL-38999 Series IV plugs
- Maintains all the features of standard MIL-DTL-38999 Series IV receptacles
- Scoop-proof pins provide contact protection
- Uses insert patterns from MIL-DTL-38999 Series III

G

# FPT – MIL-DTL-26482 Series

## Circular Filter Connectors Features, Alternate Rotations

The Amphenol® FPT Series combines the unique design features of the miniature PT Series with an EMI filter.

- Intermateable with MIL-DTL-26482 Series connectors; see Matrix 26482, Series 2 at [www.amphenol-aerospace.com](http://www.amphenol-aerospace.com) or Catalog MIL-DTL-26482, Series 1.
- Quick positive coupling with visual confirmation of mating
- Higher reliability and greater durability with permanently encapsulated contacts
- Aluminum shells with several finish options

# Amphenol FAN Series

## Filtered “AN” - Features, Alternate Rotations

The “AN” Filter Connector is designed in configurations intermateable and intermountable with MIL-DTL-5015\* connectors and provides electromagnetic interference protection for critical circuits.

- Same dimensions as the non-filtered standard MIL-Spec connectors with the exception of back shell length. (See Catalog MIL-DTL-5015).
- Uses non-removable solder cup terminated contacts.
- Shells are impact extruded or machined bar stock aluminum and are available in several conductive platings.
- Applications include power transmission, medical communications, and ground support equipment.

**FAN**

The following insert arrangements within the 5015 family have the same alternate insert rotations for W, X, Y and Z, which are:

Degrees					
W	X	Y	Z		
80	110	250	280		
16-7	20-22	22-29	24-17	28-16	32-13

# Amphenol Filter Adapters

## Circuit Protection for Existing Applications

Filter adapters present an effective and economical method of introducing EMI/EMP protection to an installed system. The adapter series of filter connectors from Amphenol are available to intermate with all the popular MIL-Specs.

### FEATURES OF THE AMPHENOL ADAPTER INCLUDE:

- Planar technology from the industry's leader in circulars
- Filter products
- MOV or diode capability for transient protection
- Wide range of tooled patterns
- Space qualified components

### ADAPTERS

Installation of the adapter is quick and efficient, requiring no tools, fixtures or extended downtime. Simply un-mate the existing cable harness from the receptacle; attach the coupling nut to the receptacle on the unit; then mate the cable harness to the receptacle side of the adapter.

Several design alternatives are available that will help ensure that the adapter remains permanently attached to either the cable harness or the unit receptacle.

# Transient Protection

## MOV– Metal Oxide Varistor Connectors

### FEATURES & BENEFITS:

- Filter connector size package
- Protection for 14, 31, 38 DC voltage circuits
- Radiation hardened
- No additional circuits required
- Low impedance
- Increased reliability
- Nanosecond response time
- Elimination of costly external suppression assemblies

The Amphenol® MOV Connector offers the versatility of a standard connector, with transient protection for sensitive circuits. Transients in electrical circuits caused by a sudden release of stored energy can originate within or outside of the circuit and may be repeatable or random.

Regardless of frequency or origin, transient caused failures generated by load switching, lightning, electrostatic discharge (ESD) and electromagnetic pulse (EMP) can destroy unprotected IC components.

Compatible with present filter connector assembly procedures, MOVs can be combined with existing filters. Internal housing of the MOV offers weight and space savings over other protection methods available today, and eliminates costly and bulky exterior suppression mechanisms in appropriate situations. MOVs are presently available in contact sizes 22, 20 and 16.

Transient protection can be provided in receptacle, plug or adapter configuration. These connectors are intermateable and intermountable with the following MIL-Specs:

- MIL-DTL-38999
- MIL-DTL-83723
- MIL-DTL-5015
- MIL-DTL-26482
- MIL-DTL-26500
- MIL-DTL-27599

Input 2.5A

# Transient Protection

## Diode Connectors

### FEATURES & BENEFITS:

- Clamping voltage as low as 11.9 volts
- Low capacitance – suitable for high frequency applications
- Unipolar or bipolar – using existing proven diode technology
- Protection for 5.8 to 60 VDC circuits
- No additional circuits required
- Low impedance – high frequency response
- Increased reliability
- Nanosecond response time
- Elimination of costly external suppression assemblies
- Screening to applicable requirements of MIL-S-19500TX/TXV available
- Keeps transients outside of the box
- Minimizes fast transient voltage overshoot

The Amphenol® Diode Connector offers the versatility of a standard connector, with transient protection for sensitive circuits, such as TTL Lines.

Transients in electrical circuits caused by a sudden release of stored energy can originate within or outside of the circuit and may be repeatable or random.

Regardless of frequency or origin, transient caused failures generated by load switching, lightning, electrostatic discharge (ESD) and electromagnetic pulse (EMP) can destroy unprotected IC components.

Compatible with present filter connector assembly procedures, diodes can stand alone or can be combined in series with filters. Internal housing of the diode offers weight and space savings over other protection methods available today, and eliminates costly and bulky exterior suppression mechanisms in appropriate situations. Diodes are presently available in contact sizes 22 and 20.

Transient protection can be provided in receptacle, plug or adapter configurations. These connectors are intermateable and intermountable with the following MIL-Specs:

- MIL-DTL-5015
- MIL-DTL-26482
- MIL-DTL-26500
- MIL-DTL-27599
- MIL-DTL-38999
- MIL-DTL-83723

Amphenol can provide COTS solutions utilizing leaded & surface mounted devices. For more information contact Amphenol Aerospace at 800-678-0141.

# Transient Protection

## ESA – Energy Shunting Assembly

The Amphenol® Energy Shunting Assembly (ESA) is a simple, compact unit which provides lightning and electromagnetic pulse (EMP) protection of systems in which many signal lines enter sensitive electronic equipment. The efficient packaging of the ESA circumvents the concept of one protective device per line. It provides a surge arrester which has the advantage of space saving and simplified assembly when compared to current protective devices which range from diodes to large spark gaps.

The current ESA design consists of two 53-pin contact, Mil-Standard, hermetic connectors assembled back to back, and encompassing a ground plate. A sealed chamber is formed within this thru-bulkhead unit, housing 53 in-line spark gaps. Introducing a controlled atmosphere enhances fast rise breakdown.

The ESA can be integrated with an EMI filter connector which can improve its performance. These two assemblies provide a method to help protect against lightning, EMP, EMI and TEMPEST effects.

**ESA**  
**ENERGY SHUNTING ASSEMBLY**

### PERFORMANCE CHARACTERISTICS

1. DC breakdown voltage		230 Volts
2. Maximum rated surge discharge current (8 x 20 microsecond pulse)		5,000 Amperes per pin
3. Insulation resistance		10 <sup>10</sup> ohms minimum
4. Capacitance between each electrode and the ground plane		Less than 2 pf
5. Rate-of-rise breakdown voltage	Maximum Breakdown Voltage (Volts)	Rate of Rise (Volts/microsecond)
	600	10
	800	1,000
	1,500	10,000
	2,000	1000,000
6. Surge breakdown unbalance (at 100 Volts/microseconds)		180 Volts
7. Surge life (500 Ampere – 10 x 1,000 microsecond)		400 Surges
8. Hold-over voltage		100 Volts
9. Arcing voltage		40 Volts
10. Glow to arc transition point		1 Ampere
11. Temperature range		-40°F to 150°F (233°K to 339°K)

# (ESD) Protected Connectors

## Protection from Electrostatic Discharge

Amphenol has developed cylindrical and rectangular connectors which protect sensitive components from Electrostatic Discharge (ESD) without diodes, varistors, gas tubes, or “experimental” semi-conductive materials.

These connectors utilize the Faraday Cage principle to shunt electrostatic discharge events to the conductive enclosure on which the connector is mounted, thus never allowing the high voltage, high current discharge event to reside on any contacts. The ESD protected connectors have the same physical envelope as their standard counterparts, and do not require special mounting or terminating techniques. All of the contacts remain fully functional, and electrical characteristics such as capacitance are not effected.

### PRODUCT FEATURES:

- Connector envelope identical to unprotected design for most applications
- Exceeds protection requirements of IEC 801-2 and MIL-STD-1686:
- Ensures that all components within a conductive enclosure will be subjected to a maximum of 10V during electrostatic discharges between -26 KV and +26 KV
- Voltage observed on contacts during ESD events - <10V (at 1 megohm)
- Current observed on contacts during ESD events - <100 milliamperes (at 2 ohms)
- Response time - instantaneous (voltage and current are maximum values)
- Maximum ESD voltage - tested to ±26KV
- No capacitive loading
- Eliminates the need for discrete components (such as diodes) and maximizes printed circuit board real estate for equipment housed in conductive enclosures which require ESD protection as free-standing units
- Operating voltage of connectors not affected for most designs
- Pulse life - infinite

### WHAT IS ELECTROSTATIC DISCHARGE (ESD)?

Electrostatic Discharge (ESD) is the rapid transfer of a static electric charge from one body to another. A static electric charge consists of either a surplus or depletion of electrons on a body, which gives that body a potential or voltage relative to ground (or another body). The discharge is extremely fast (less than 1 nanosecond risetime) and the current flow may exceed 100 amps!

Static electricity is normally the result of two materials transferring charges when rubbed or separated, such as shoes scuffing across a dry carpet, or sheets of untreated plastic being separated. This phenomena is commonly referred to as the triboelectric effect. The voltage developed due to the triboelectric effect depends on the materials involved, the quantity and type of contact, and relative humidity. In a dry environment a person can accumulate a charge of up to 25 KV! In a moist environment a person's potential is reduced due to the effect of moisture on the insulating properties of materials.

### WHAT IS A FARADAY CAGE?

A **Faraday Cage** is a conductive enclosure. It may be solid in form such as a sheet-metal enclosure, or it may be full of apertures, such as a wire cloth box. When a charge is placed on a Faraday Cage, the electrons which make up the charge, having like polarity,

**ESD TESTING ON MIL-DTL-38999, SERIES III FILTER CYLINDRICAL CONNECTOR (ACTUAL PHOTO)**

try to position themselves as far as possible from each other. This places the electrons on the outer surface of the enclosure, leaving the inner surface uncharged. The charge on the outer surface does not induce a charge on any neutral object inside of the Faraday Cage, and therefore does not try to transfer itself onto the internal object. Neutral objects (such as IC's) inside of a faraday cage are thereby protected from ESD activity external to the Faraday Cage.

The voltage and current observed on neutral objects within a Faraday Cage during ESD events are due to the secondary effects of ESD. These include Electromagnetic Interference (EMI), magnetic and electrical field coupling. The Faraday Cage of the Amphenol ESD Protected Connectors has been designed to minimize these effects.

### THE AMPHENOL® ESD PROTECTED CONNECTORS

The Amphenol ESD Protected Connectors have a Faraday Cage at the mating interface. The Faraday Cage has been specifically designed to intercept electrostatic discharges from the contacts in the unmated state, while maintaining each contact's isolation when the connector is mated. When the ESD Protected Connectors have been mounted to a conductive enclosure, a Faraday Cage is created which will protect components located within the enclosure from electrostatic discharges. This eliminates the need for discrete components such as diodes and gas discharge tubes, and saves printed circuit board real estate. Amphenol ESD Protected Connectors have also been applied to Line Replaceable Modules (LRM).\*
